

LastOne_Screen_Inventory_Design_V1

LastOne — Screen Inventory for Design Phase

Date: May 2026

Status: Ready for design handoff

This document lists every screen required for the LastOne V1 design phase. Organized by feature area. Spec IDs are used where formally defined. The final section flags what is explicitly on hold and why.

1. Home Screen

On hold — see Section 12.

The individual components that live on the home screen are spec'd in other documents, so the content is understood. But the screen composition — hierarchy, carousel logic, same-session card priority conflicts — needs its own dedicated Home Screen spec before this screen can be finalized.

Components already spec'd that will live here:

- Streak widget (STK-1)
- Three counter cards + daily check-in card (DASH-1)
- Giving Up Support trigger card (GU-1) — replaces daily check-in when conditions are met
- Insights preview card (referenced in nav map)
- Goals carousel card (Stage 2+)
- Alert-level coping surface card (quiet "Need a moment?" card during known risk windows)

2. Logging Flows

All four flows + SOS overlay are fully spec'd in the Logging System Spec V1.2.

Screen	Description
Log FAB Half-Sheet	Half-sheet on FAB tap. Four options: "I feel like smoking" / "I resisted a craving" / "I smoked" / "Quick note"

Screen	Description
A1 — Intensity	Craving intensity selector (1–10, slider or tap). Required. Auto-saves on exit after this screen.
A2 — Context	Optional trigger / location / social context chips with 'Other' free-text option. Escape hatch "I need help now" → routes to SOS.
B1 — Celebration	Celebration animation on overcome log. Streak counter visually increments here.
B2 — What Helped	Optional multi-select chips after overcome.
C1 — Acknowledgement	Full-screen, warm, gain-framed slip acknowledgement. No questions. Single CTA to continue. Most tone-sensitive screen in the app — no blame, no streak imagery.
C2 — Slip Context	slip_type (required: one-off / been a few days / back to regular), cigarette count (optional), trigger chips (optional).
C3 — Support Response	Personalised response per slip_type. "Just keep going" / inline restart date picker / routes to Giving Up Support System.
D — Quick Note	Text field (280 chars), optional mood selector (5 faces), optional photo. No confirmation screen — toast confirms save.
STK-2 — Return Modal (1–4 days)	Modal on app open after 1–4 day absence. Three options: Didn't smoke / Had one or two / Smoked regularly.
STK-3 — Return Flow (5+ days)	Full-screen after auto-pause triggers at Day 5 of inactivity. Three options: I didn't smoke / Treat it as a break / I did smoke on some days.

Note: Notification entry points into logging flows (notification tap → which screen opens) are deferred to the Notifications spec. All other entry points (FAB, SOS FAB, daily check-in card) are fully specced and ready to design.

3. SOS Flow + Tool Execution

Fully specced across Logging System V1.2 and Coping Tools Suite V1.2.

SOS Shell

Screen	Description
SOS-1 — Tool Selection	Curated 3-tool surface. Stage- and history-aware. One tap to a tool — no menus, no browsing. At escalation (2+ failed SOS sessions in 24h), Call a Friend pins to slot 1.
Physical Context Gate	Fires before any physical tool in SOS only (not during passive library browsing). Two large tap targets: "Around people" / "On my own."

Screen	Description
	Nothing else on screen.
SOS-3 — Post-Tool Check-in	"Did that help?" thumbs up / thumbs down. "How are you now?" — Better / Same / I smoked. Skippable via visible dismiss option. Better → optional what-helped chips → home. Same → "Try another tool?" or "Just wait it out" (craving timer). I smoked → compressed Flow C (C1 + C3 only, skips C2).

Individual Tool Execution Screens (12 total)

Each tool has its own execution UI. All share the SOS-3 post-tool check-in but the active exercise screen is unique per tool.

Tool ID	Tool Name	Key Design Notes
BRE-01	Box Breathing	Animated square pacer. Each of 4 sides activates for its 4-second phase. Soft count in corner. Works in public — no audio required.
BRE-02	4-7-8 Reset	Circular pacer: expands on inhale, holds at full size, contracts slowly on exhale. Subtle pulse animation during the 7-second hold. Primary SOS breathing tool.
BRE-03	Physiological Sigh	Distinct from all others: darker background, simpler animation, one instruction at a time. Two quick expanding shapes for double inhale, one very slow contraction for exhale. 2 full seconds of stillness after final exhale before any feedback — this pause is part of the exercise. Optionally haptic-guided.
BRE-04	5-5-5 Grounding Breath	One sensory prompt per phase, never all three at once. Text-only mode worth building for users in public who may glance rather than watch a full animation.
PHY-01	Finger Pulse Press	Screen dims slightly. Wrist illustration with single pulsing dot. Beat counter 1–10. No other text mid-exercise. Completion: subtle haptic pulse. Looks like user is checking their watch — socially invisible by design.
PHY-02	Tongue Press	Instructions appear one line at a time, advancing on tap — never all at once. Breath counter: 5 rings, one filling per breath (timer-based, not mic-based).
PHY-03	Push-ups	Large rep counter fills screen. Just the number, counting down from user's configured rep (5/10/15). 10-second still timer after completion with prompt "Stand still. Notice your breathing."
PHY-04	Squat Jumps	Same large rep counter as PHY-03. 15-second still timer after completion (5 seconds longer than push-ups — breath recovery after squat jumps takes longer, and that window is part of the intervention).

Tool ID	Tool Name	Key Design Notes
MIN-01	Echo Tap	Rhythm replication game. Game plays a tap sequence with visual and optional haptic. Player replicates by tapping. Correct tap = satisfying visual. Wrong tap = gentle buzz. Sequences grow longer and faster as player progresses.
MIN-02A	Memory Game (1P)	Grid of face-down cards (3×4 for quick session, 4×4 for longer). Grid fills screen during play — only matched pair counter visible at top. Completion screen: pairs found + time taken.
MIN-02B	Memory Game (2P)	Same grid as 1P. Pass-and-play. Prominent turn indicator at top. Separate score tracking per player. Each player taps their own post-tool check-in when phone is passed to them.
MIN-03	Find Match (2P)	Board of mixed visual elements — both players race to find the matching pair. Async round model for V1 (no real-time sync needed). Incorrect tap triggers 2-second tap penalty. First to X points wins.

4. Tools Hub (Library Layer)

Specped in Coping Tools Suite V1.2 and Navigation Flow V2.

Screen	Description
Tools Hub — Main	Three active categories for V1: Breathing Exercises, Physical Reset, Games and Puzzles. AI Bot category label present but screen behind it is benched for this version. All 12 tools browsable here. In Stage 0, a supportive friction message appears before proceeding with any tool.
Tool Detail / Library View	Per-tool info screen: name, when to use it, how it works, "Try it" CTA. Accessible from the hub. This is the calm-state reading experience — not the SOS execution screen.

5. Streak System

Fully specped in Streak System Spec V1.2.

Screen	Description
STK-1 — Home Streak Display	Persistent widget on home screen. Shows current streak + freeze stock (snowflake icons) + consistency rate (Stage 2+) + lifetime total. All states defined in spec.

Screen	Description
STK-4 — Freeze Tooltip	Tappable on snowflake icons. Explains what a freeze is, how many remain, and when stock refills. In-context overlay on STK-1.
STK-5 — Streak Reset State	Home screen state after streak resets to 0. Lifetime total becomes visually prominent. Two CTAs: Restart / Take a Break.
STK-6 — Personal Best Celebration	Overlay when current streak exceeds longest streak ever. Celebratory. Share-to-buddy option deferred until social features ship.
STK-7 — Pause Confirmation	Shown when user selects "Take a Break" from STK-5 or Settings. Explicitly states what's preserved (consistency rate, lifetime total) and what resets (streak) on resume.
STK-8 — Health Milestone Timeline	Full timeline of health recovery milestones. Three card states: lit (achieved), ghost (partially achieved — halfway rule applies), upcoming. Accessible from STK-1.

STK-9 is a push notification, not a screen.

6. Progress Dashboard

Fully spec'ed in Progress Dashboard Spec V1.2.

Screen	Description
DASH-1 — Home Dashboard Content Area	The main content area of the home screen. Three counter cards: Money Saved (with personalised equivalent, e.g. "That's 13 Zomato orders"), Time Reclaimed, Cigarettes Not Smoked. Daily check-in card below. This is not a separate navigation destination — it is the home screen's content.
DASH-2 — Expanded Counter View	Opens on counter card tap. Two sections: (1) Scale ladder — daily / weekly / monthly / yearly figures personalised to user's CPD. (2) Horizontal scroll of reference milestone cards — active cards full colour and tappable, inactive cards dimmed but readable.
DASH-3 — Equivalent Category Picker	On hold — see Section 12. Single-choice screen: 6 spending categories (Food Delivery, Movies & OTT, Music & Podcasts, Travel, Gaming, Clothes & Shopping). Ownership transfers to Onboarding spec when written.

7. Insights

Fully spec'ed in Insights Feature Spec V1.2.

Screen	Description
INS-1 — Insights Feed	Main screen. Ranked vertical feed of insight cards. Behaviour evolves across stages: profile-building in Stage 0 → full pattern feed by Stage 3. Entry point from navigation.
INS-1a — Empty State	Stage 0 only, before first cigarette log. Single prompt: "Log your first cigarette to start seeing your patterns." Replaced permanently on first log and never shown again.
INS-2/3 — Insight Card (collapsed / expanded)	Cards expand in-place within INS-1 on tap — no separate screen. Collapsed: category label + headline + one-sentence body. Expanded: full insight detail + transparency line where applicable (e.g. risk window toggle: "App stays alert 5:30–6:30pm — tap to turn off"). These are component states of the same card, not separate routes.
INS-4 — Learning Week Profile View	Full-screen. Peak time windows, social context breakdown, top trigger categories, mood at smoking. Separate navigation stack entry. Accessible from the collapsed Learning Week profile card in the feed (Stage 3+).

Note: High-sensitivity copy variants (three voice styles) for insight cards are pending card list lock. Screen structure is fully designable; the copy is a parallel deliverable.

8. Personal Goals

Fully spec'ed in Personal Goals Spec V1.2.

Screen	Description
GOAL-01 — Goals Dashboard	Main screen. total_saved pool displayed once at top. All active goal cards. Causes Card (Stage 3+ only, inline). Occasion nudge card when active.
GOAL-02 — Add Goal: Entry Method	Two options: "Paste a product link" or "Enter manually."
GOAL-03 — Add Goal: URL Input	Text field for pasting a product URL. Supported platforms listed (Amazon, Flipkart, Myntra, Blinkit, Nykaa, Swiggy Instamart). Triggers parse on submit.
GOAL-04 — Add Goal: Confirm Pulled Details	Shows parsed product name, image, price. All fields editable. Price field blank on partial parse — user fills manually. Price required before save.
GOAL-05 — Add Goal: Manual Entry	Goal name (required), target amount in ₹ (required), image or emoji (optional), "Why this matters" (optional, private).

Screen	Description
Form	
GOAL-06 — Goal Detail View	Goal name, image, target/current/allocated amounts, progress bar, auto-savings display, "Add money" CTA, top-up history log.
GOAL-07 — Manual Top-Up Input	Amount input (INR). Triggers Goal Completion State if threshold is reached.
GOAL-08 — Goal Completion State	Celebratory screen. "Mark as complete" or "Keep saving" (progress bar shows overflow %).
GOAL-09 — Completed Goals History	List of past completed and retired goals. Accessible from GOAL-01.
GOAL-10 — Allocate Savings Screen	total_saved pool at top. Active goals listed with input fields — fixed ₹ amount or percentage mode. Unallocated remainder updates live. Over-allocation disables Confirm.
GOAL-11 — Causes Card	Inline card within GOAL-01. NGO name + one-line descriptor + voice-matched card copy + "Learn more" CTA. Dismissible. Three NGOs on 14-day rotation (Stage 3+): CFI, CPAA, CanSupport.

9. Settings & Profile

Fully spec'ed in Settings & Profile Spec V1.2.

Screen	Description
PROF-01 — Profile Tab Root	Scrollable. Four sections: Your Journey / Preferences / Your Support / Privacy & Account. Editable rows show current value + chevron. Read-only rows show value only.
PROF-02 — Edit Quit Date (Stage 0)	Date picker. Minimum 3 days, maximum 14 days from account creation date. Greyed-out dates outside valid range.
PROF-03 — Quit Date Redirect (Stage 1+)	Modal when user taps Quit Date after Stage 0. Copy: "Want to change your quit date? Tell us what's going on." Two options: "Taking a pause" / "Starting fresh."
PROF-04 — Edit Cigarettes Per Day	Single numeric input (integers only, minimum 1). Saves and triggers prospective Progress Dashboard recalculation.
PROF-05 — Edit Price Per Cigarette	Single numeric input (INR, decimal allowed). Same recalculation trigger.
PROF-06 — Voice Style Picker	Three options, each showing the style name + a sample line of copy in that voice so the difference is clear.
PROF-07 — Spending Category	Six options with one-line description of what equivalents each produces. Re-renders Progress Dashboard equivalent lines on

Screen	Description
Picker	confirm.
PROF-08 — Edit Display Name	Single text input. Max 30 characters. Character count shown.
PROF-09 — SOS Contact Setup	Name + phone number fields. Handles first-time setup and editing existing contact. "Remove Contact" option visible if contact already set — requires confirmation.
PROF-10 — Notification Settings	Master on/off toggle at top. Frequency selector below (App Decides / Few Daily / Once Daily / On Demand) — disabled when toggle is off. Delivery logic lives in Notifications spec.
PROF-11 — Quiet Hours	On/off toggle + start time and end time pickers (disabled when toggle off). Note shown: "SOS notifications always come through, even during quiet hours."
PROF-12 — Account Details	Current email displayed. Options: Change Email / Change Password.
PROF-13 — Data Export	Explains what's included in the export and that it's sent to the registered email. Single CTA: "Request Export." Confirmation toast on submit.
PROF-14 — Delete Account	Explains deletion is permanent. Text input requires typing "DELETE" exactly before confirm button enables.

10. Giving Up Support System

Fully spec'd in Giving Up Support System Spec V1.0.

Screen	Description
GU-1 — Trigger Card	Home screen card with distinct visual treatment — warmer, softer than the daily check-in card. No streak imagery, no numbers. System-triggered (not user-initiated). Three voice variants. Persists up to 3 sessions if ignored.
GU-2 — Beat 1: Validation	Full-screen. Single piece of voice-matched copy naming the difficulty without shame. No data, no numbers. Single CTA: "Keep going."
GU-3 — Beat 2: Resistance Data	Full-screen. Overcome count from last 14 days, gain-framed. Skipped entirely if no overcome logs exist — never shows a zero.
GU-4 — Beat 3: Choice	Full-screen binary. "Just keep going" or "I want to talk to someone." No restart prompt. Low commitment intentionally.
GU-5 — Talk Options	Half-sheet. If support person configured: "Call [Name]" + "Talk to a counsellor." If not: "Set up a support person" + "Talk to a counsellor."

Screen	Description
GU-6 — Pre-Call Screen	Contact name + avatar/initial + voice-matched one-liner. "Call" and "WhatsApp" buttons.
GU-7 — Post-Call Log	"How did that go?" Three options: Helped a lot / Helped a little / Didn't really help. Toast on completion: "Good that you reached out."
GU-8 — Professional Resource Cards	Two cards: tobacco cessation helpline + mental health helpline. Each with name, description, contact detail, "Call" button. Note: specific helpline numbers need team vetting before build — do not use placeholders in the live app.
GU-9 — Support Person Setup	Contact picker + briefing message send. Used during onboarding (Chapter 4) and accessible mid-journey from GU-5. Shared with Onboarding spec.
GU-10 — Briefing Message Preview	Pre-written briefing message displayed in a text-area view. Edit option. "Send via WhatsApp" and "Send via SMS" buttons.

11. Content Cards Surface

The content card database is fully defined (63 cards across Myth Busters, Your Body, Practical Tips, User Stories). The browsing screen container is referenced in the Navigation Flow as accessible from Streak → Detail → Content Cards, but a formal screen spec for the container hasn't been written.

Screen	Description
Content Cards Browser	Browsable surface of evergreen content cards. Same card collection shared between the Streak detail entry point and the Content Cards navigation destination. Card schema is defined (title, body copy, pill tag, trigger type, stage range). Browsing UI, filter / category structure, and card layout need to be decided at design time.

12. What's On Hold and Why

Held Screen / Area	Waiting for
Home Screen composition	Home Screen spec — individual components are spec'd but the screen itself (card hierarchy, carousel logic, same-session conflict resolution between GU-1 and daily check-in card, etc.) needs its own document

Held Screen / Area	Waiting for
All Onboarding screens	Onboarding spec — covers dependency assessment, quit date setting, voice style selection, rep count setup for PHY-03 and PHY-04, DASH-3 (spending category picker), GU-9 (support person setup in onboarding context)
Notification entry points into logging flows	Notifications spec — all FAB / SOS / daily-card entry points are designed, but "notification tap → which screen opens" is explicitly out of scope until this doc is written
PROF-10 delivery logic	Notifications spec — the settings screen itself (toggles, frequency selector) is fully designable; what the frequency tiers actually govern in the delivery layer lives in the Notifications spec
DASH-3 ownership	Onboarding spec — the screen is specced in Progress Dashboard spec as a placeholder but formally transfers to Onboarding spec when it's written
Community / Social screens	Social Architecture — entire Community tab (Groups, Feed, Friends, Achievement, Search) is deferred to V2. Anonymous Mode, Profile Card, Cheerleaders, Group Visibility all deferred.
AI Bot screen	Benched for V1. Category label appears in Tools Hub but screen behind it is not being built this version.
